

表單處理

單純傳送欄位變數的表單

新增一個內含表單的子網頁 `login.html`，留意表單的傳送處為 `/login/`

`C:\Users\226083\django_test\myweb\templates\login.html`

```
{% extends 'base.html'%}

{% block title %}使用者登入{% endblock %}

{% block main %}
    <h1>使用者登入</h1>
    <form action="/login/" method="post">
        {% csrf_token %}
        <label for="uName">名稱:</label>
        <input id="uName" type="text" name="uName">
        <label for="uPass">密碼:</label>
        <input id="uPass" type="text" name="uPass">
        <input type="submit" value="送出">
    </form>
{% endblock %}
```

`C:\Users\226083\django_test\myweb\myweb\urls.py`

```
urlpatterns = [
    path('admin/', admin.site.urls),
    path('', views.main),
    path('hi/<username>/', views.hiname),          # 傳遞字串參數 username
    path('age/<int:year>/', views.age),            # 傳遞數值參數 year
    path('hello/', views.hello_view),
    path('getName/<username>/', views.getOneByName), # 傳遞字串參數 username
    path('getAll/', views.getAll),
    path('login/', views.login),
    # path(r'^admin/', admin.site.urls),
    # path(r'^$', sayhello),
]
```

C:\Users\226083\django_test\myweb\myapp\views.py

修改第 1 行敘述，多了 redirect

增加第 6 行敘述

```
from django.shortcuts import render, redirect
from django.http import HttpResponse
from datetime import datetime
from myapp.models import student
from django.http import Http404
from django.contrib import auth
```
